Smart Water Shut-Off Valve

Water has finally met its match.

The Ezlo Smart Water Shut-Off Valve is the industry's smartest water management solution, featuring a two-part design — ball valve and actuator — that distinguishes it from every other shut-off valve on the market.

Unlike other valves that rely on a manual lever, our Smart Water Shut-Off Valve actuator sits atop the valve and controls the flow of the water. More importantly, the valve's state of the art actuator does much more than manage the flow of water. It's also a built-in control hub that can serve as the foundation for an entire smart home automation system including, for instance, a host of sensors and security devices. When paired with a home's flow meter, the valve's actuator can provide homeowners with valuable insights into their water consumption habits.

For more information, please contact your Ezlo Sales representative or email sales@ezlo.com.

Nearly 45% of the population has experienced water damage in their home or knows someone who has. And sometimes, that damage isn't covered by insurance. The Ezlo Smart Water Shut-Off Valve offers the protection you need and the peace of mind you want.

Key Features

Fully embedded Z-Wave Hub for controlling devices

Remote access via app and Z-Wave

Ball valve separates from actuator for easy installation

May qualify for homeowners insurance discounts

Local controls plus manual override handle

Multiple valves may be used in single system

Specs

Materials

Lead-free brass ball valves with commercial grade seals

Polycarbonate enclosure

Designed for over 20,000 on/off cycles

IP67 Waterproof

Power

Voltage: 110 VAC converted to 24V DC (Class 2 power converter with 20' cord, 1.3A full load

Optional battery backup

Dimensions

6.25" x 7" x 3.78"

Comes in standard NPT sizes (3/4", 1", 1 1/4")

Wi-Fi 2.4GHz 802.11 b/g/n

Z-Wave Plus, S2 Security
